

# Enterprise OSPF Routing Lab — Next GitHub Upload Guide

Exact file names + folders + what to upload | Copy the names exactly for a clean MNC portfolio

| STEP | GitHub Folder  | Exact File Name                     | What You Need to Upload                                   |
|------|----------------|-------------------------------------|-----------------------------------------------------------|
| 1    | topology/      | topology.png                        | Final MNC-level Cisco Packet Tracer topology image.       |
| 2    | screenshots/   | 01-ospf-neighbors.png               | R2: show ip ospf neighbor — R1 and R3 should show FULL.   |
| 3    | screenshots/   | 02-ospf-routes-r2.png               | R2: show ip route ospf — HQ and DC routes.                |
| 4    | screenshots/   | 03-ospf-routes-r3.png               | R3: show ip route ospf — HQ and Branch routes.            |
| 5    | screenshots/   | 04-ospf-interface-brief.png         | show ip interface brief — interfaces up/up.               |
| 6    | screenshots/   | 05-show-ip-protocols.png            | show ip protocols — OSPF process, networks and area.      |
| 7    | screenshots/   | 06-ping-end-to-end.png              | PC-HQ ↔ PC-DC successful ping.                            |
| 8    | screenshots/   | 07-troubleshooting-before-after.png | R2-R3 failure and successful fix evidence.                |
| 9    | configs/       | router-configs.txt                  | R1-HQ, R2-BRANCH and R3-DC OSPF configurations.           |
| 10   | documentation/ | troubleshooting.md                  | R2-R3 incident, root cause, corrective action and result. |
| 11   | lab/           | Enterprise-OSPF-Routing-Lab.pkt     | Your actual Cisco Packet Tracer project file.             |

## Recommended upload order

topology → screenshots → configs → documentation → .pkt → final README verification

## Recommended commit messages

Add enterprise OSPF topology and project evidence  
Add OSPF verification screenshots  
Add router configurations and troubleshooting documentation  
Add Cisco Packet Tracer lab file

## Important

Do not upload passwords, API keys, tokens or private credentials. Use the exact lower-case file names above so the repository looks consistent and professional.

# Screenshot Capture Checklist — Use These Exact Names

Run the command, capture only the useful output, save the image with the exact name, then upload it to screenshots/.

| File Name                           | Device            | Command                 | Expected Evidence                                          |
|-------------------------------------|-------------------|-------------------------|------------------------------------------------------------|
| 01-ospf-neighbors.png               | R2-BRANCH         | show ip ospf neighbor   | Expected: 1.1.1.1 FULL and 3.3.3.3 FULL                    |
| 02-ospf-routes-r2.png               | R2-BRANCH         | show ip route ospf      | Expected: 192.168.10.0/24 and 192.168.30.0/24              |
| 03-ospf-routes-r3.png               | R3-DC             | show ip route ospf      | Expected: 192.168.10.0/24 and 192.168.20.0/24              |
| 04-ospf-interface-brief.png         | R1/R2/R3          | show ip interface brief | Expected: relevant interfaces up/up                        |
| 05-show-ip-protocols.png            | R2-BRANCH         | show ip protocols       | Expected: OSPF process 1, Area 0 networks                  |
| 06-ping-end-to-end.png              | PC-HQ             | ping 192.168.30.10      | Expected: 5/5 successful                                   |
| 07-troubleshooting-before-after.png | R3-DC / R2-BRANCH | ping 10.0.23.1          | Show before-fix failure and after-fix success if available |

## Final repository should look like this

Enterprise-OSPF-Routing-Lab/

■■■ README.md

■■■ topology/topology.png

■■■ configs/router-configs.txt

■■■ screenshots/01-ospf-neighbors.png ... 07-troubleshooting-before-after.png

■■■ documentation/troubleshooting.md

■■■ lab/Enterprise-OSPF-Routing-Lab.pkt

**Next action:** Complete Step 2 first — save your R2 OSPF neighbor screenshot exactly as 01-ospf-neighbors.png. Then upload it to screenshots/.
